The Tasaday Controversy: Assessing the Evidence

Thomas N Headland, editor

In 1971 a band of cave-dwelling people called Tasaday were discovered living in a remote area of rain forest in the Philippines. These 26 people were reported to be following a paleolithic lifestyle, surviving solely on wild foods, and wearing leaves for clothing. After the international flurry of news articles and TV films in the early 1970s, no further word was heard about the Tasaday for thirteen years. Then, in 1986, news reports suddenly flooded the international press claiming that the whole story had been a hoax.

Are the world-famous Tasaday the most primitive people on Earth, one of the major anthropological discoveries of the century? Or were they the hoax of the decade? In this volume, 19 scholars, 9 of whom did fieldwork in the Tasaday area, present their differing views on this controversy.

The volume shows that no simple resolution of the controversy has emerged. Whatever occurs in the future, however, it is vitally important that the existing evidence be made available for scrutiny and debate, and this is a major contribution of this collection of essays.
